Muhammad Wasiq Tanveer

FULL-STACK DEVELOPER · AUTOMATION ENGINEER · AI INTEGRATIONS

mwasiqt@gmail.com · +92 343 9177677 · Kohat, Pakistan · LinkedIn · GitHub · Portfolio

SUMMARY

Full-stack developer who takes production systems from empty repo to shipped product. Sole engineer behind a live SaaS platform for an Amazon PPC agency — React, Node.js, Express, MySQL — running 15+ analytics tools and three Chrome extensions used daily across 20+ client accounts. Comfortable writing test-covered code under review and building automation that runs unattended. Final-year CS student, CGPA 3.98/4.00, moving toward AI engineering.

TECHNICAL SKILLS

Languages	JavaScript, Python, Java, SQL, C/C++
Frontend	React, Tailwind CSS, Chart.js, Framer Motion, HTML5, CSS3, Chrome Extensions API
Backend & Data	Node.js, Express, REST API design, JWT auth, MySQL, PostgreSQL, Supabase
AI & Automation	Anthropic API, OpenAI API, DeepSeek API, prompt engineering, Keepa API, web scraping, webhooks
Testing & DevOps	Jest, Mocha, Chai, Supertest, React Testing Library, GitHub Actions (CI/CD), Git, Vercel, OAuth2

EXPERIENCE

MERN Stack Developer (Internship) · 10Pearls Pakistan · Remote — Jul 2026 – Sep 2026

- Built Notely, a full-stack note-taking application — React 19 / Vite / Tailwind front end, Express 5 API, PostgreSQL with hand-written SQL and no ORM — with JWT and bcrypt auth, rich-text editing, and a soft-delete trash that purges on read after 7 days.
- Tested both halves of the stack with Mocha/Chai/Supertest and Jest/React Testing Library against a dedicated test database, and added structured Pino logging with redaction so passwords, hashes and tokens never reach the log stream.
- Scoped every query to its owner — returning 404 rather than 403 so responses never confirm another user's data exists — and sanitised rich text twice, on render and before persistence, to close XSS paths; shipped through a branch-per-feature pull request flow with mandatory mentor review.

Automation Engineer — Sole Developer · Ads Acceleration · Remote (Lahore, PK) — Mar 2026 – Present

- Designed and built the entire adsacceleration.com platform from scratch — React frontend, Node.js/Express API, MySQL database — as the only engineer on the product.
- Shipped 15+ Amazon-seller analytics tools, including an SQP Analyzer, Keyword Cannibalization Analyzer, PPC Impact Visualizer, Negative Keyword Hunter and an AI-powered Listing Comparator.
- Built three Chrome extensions that inject live dashboards into Amazon Seller Central, removing manual CSV exports for 20+ clients and saving an estimated 5 hours per week of analyst time.
- Unified Anthropic, OpenAI and DeepSeek behind a single Node.js endpoint reused across every tool and extension, so switching provider costs one config change instead of a rewrite.
- Automated daily BSR reporting via the Keepa API and GitHub Actions cron jobs, delivering client-ready Google Sheets and Slack reports with no manual step.

Frontend Web Developer Intern · Brandora · Kohat, PK — Jun 2025 – Jan 2026

- Built responsive React/Node.js web applications and shipped the CR Attendance App, which replaced WhatsApp-based tracking and was adopted by 6+ additional class representatives.

SELECTED PROJECTS

Amazon SQP Intelligence Dashboard & Extension JavaScript · Chrome Extensions API · Chart.js · Supabase

- Auto-captures Amazon's Search Query Performance report by traversing Katal/shadow-DOM components, then rebuilds it as an interactive market-share dashboard with trend charts, filtering and CSV export Amazon's own UI lacks.

Amazon Ads Placement & Ad-Group History Chart JavaScript · Chart.js · MutationObserver · Amazon Ads API

- Injects a native-feel performance chart into Amazon Ads Campaign Manager with 9 toggleable metrics at ad-group level, overlaying bid and budget change markers via a page-world auth hook and batched API calls.

Keepa BSR Tracker & Auto-Reporter Python · Keepa API · Google Sheets API · GitHub Actions · Slack

- Serverless daily pipeline tracking BSR, reviews and Buy Box across multiple ASINs; computes day-over-day trends, auto-detects Buy Box hijackers, and writes idempotently so re-runs are safe.

Also CR Attendance App — React/Supabase, used by 6+ class reps · Paper Vault — React/PostgreSQL exam-paper archive, 35+ students · WhatsApp Moderation Bot — Node.js rule engine with strike system

EDUCATION & ACHIEVEMENTS

BSc Computer Science · Kohat University of Science & Technology · Kohat, PK — Nov 2023 – Aug 2027

- CGPA 3.98/4.00 · Class Representative, 2023–2027 · Winner, University Quiz Competition · Hacktoberfest open-source contributor · PM Laptop Scheme 4.0 recipient for academic merit.
