PROFESSIONAL SUMMARY

Full-Stack Developer and Automation Engineer who designs, builds, and ships production web applications and data-automation systems end to end. Sole engineer behind a live SaaS platform for an Amazon PPC agency (React, Node.js, Express, MySQL) with 15+ analytics tools and three Chrome extensions that inject real-time dashboards into Amazon Seller Central. Strong in REST API design, third-party and AI API integration (Anthropic, OpenAI, Keepa), and CI/CD automation with GitHub Actions. Final-year Computer Science student, CGPA 3.98/4.00.

SKILLS

Languages: JavaScript, Python, Java, C, C++, SQL

Frontend: React, Chart.js, Framer Motion, HTML5, CSS3, Chrome Extensions API

Backend & Databases: Node.js, Express, REST API Design, MySQL, PostgreSQL, Supabase

AI & Automation: Anthropic API, OpenAI API, DeepSeek API, Keepa API, Prompt Engineering, GitHub Actions (CI/CD), Web Scraping, Webhooks

Cloud & Tools: Google Sheets API, OAuth2, Git, GitHub, Vercel, VS Code

Concepts: Data Structures & Algorithms, OOP, Database Design, Browser Extension Development, Event-Driven / Async Programming

PROFESSIONAL EXPERIENCE

Automation Engineer — Sole Developer
Mar 2026 – Present

Ads Acceleration · Remote

- Designed and built the entire adsacceleration.com platform from scratch — React frontend, Node.js/Express backend, and MySQL database — as the only engineer.
- Shipped 15+ Amazon-seller analytics tools, including an SQP Analyzer, Keyword Cannibalization Analyzer, PPC Impact Visualizer, Negative Keyword Hunter, Keepa ASIN Comparator, and an AI-powered Listing Comparator.
- Developed three Chrome extensions that inject live dashboards and processed data directly into Amazon Seller Central, eliminating manual CSV exports for **20+** clients and saving an estimated **5hours/week** of manual work.
- Automated daily BSR reporting with the Keepa API and GitHub Actions cron jobs, delivering data to client Google Sheets and Slack channels with zero manual effort.
- Unified three AI providers (Anthropic, OpenAI, DeepSeek) behind a single Node.js endpoint reused across every tool and extension, cutting integration overhead.

Frontend Web Developer Intern
Jun 2025 – Jan 2026

Brandora · On-Site

- Built and shipped the CR Attendance App, replacing messy WhatsApp-based attendance tracking; adopted by **6+** additional class representatives after launch.
- Developed responsive web apps with React, JavaScript, and Node.js, and contributed to open-source projects during Hacktoberfest.

SELECTED PROJECTS

Ads Acceleration Platform
2026 – Present

React · Node.js · Express · MySQL · Multi-AI Integration

- End-to-end internal platform for an Amazon PPC agency with 15+ tools spanning keyword intelligence, PPC reporting, BSR tracking, and AI-powered listing optimization.
- Single unified AI backend (Anthropic / OpenAI / DeepSeek) shared across all tools and extensions, keeping integration overhead minimal.

Amazon SQP Intelligence Dashboard & Extension
2026

JavaScript · Chrome Extensions API · Chart.js · Supabase

- Auto-captures Amazon's Search Query Performance report by traversing Katal/shadow-DOM web components, then rebuilds it into a fast, interactive market-share dashboard (impression / click / purchase share, CTR, CVR).
- Adds period-over-period trend charts, a sortable and filterable keyword table, and one-click CSV export that Amazon's native UI lacks.

Amazon Ads Placement & Ad-Group History Chart
2026

JavaScript · Chart.js · MutationObserver · Amazon Ads API

- Injects a native-feel historical performance chart into Amazon Ads Campaign Manager with 9 toggleable metrics (Spend, Sales, ACoS, ROAS, CPC, CTR, and more) at the ad-group level Amazon doesn't expose.
- Overlays bid / budget / placement change-event markers on the timeline and surfaces placement bid adjustments as inline badges, using a page-world auth hook and batched API calls.

Amazon Console Real-Time Data Extension 2026

JavaScript · Chrome Extensions API

- Intercepts Amazon Seller Central network requests and injects live, processed insights directly into the page, removing manual exports from the seller's workflow.

Keepa BSR Tracker & Auto-Reporter 2026

Python · Keepa API · Google Sheets API · GitHub Actions · Slack

- Serverless daily pipeline that pulls BSR, rating, review, and Buy Box data via Keepa and writes a colour-coded, image-embedded Google Sheets dashboard plus Slack reports — scheduled entirely on GitHub Actions with no server to maintain.
- Computes day-over-day trends, detects Buy Box hijackers automatically, and supports multiple ASINs across marketplaces; idempotent writes make re-runs safe.

WhatsApp Group Moderation Bot 2026

Node.js · whatsapp-web.js

- Real-time moderation bot with a pluggable rule engine and a progressive warning-to-removal strike system, exempting admins and persisting sessions across restarts — replacing the need for round-the-clock manual moderation.

CR Attendance App 2025 – Present

React · Supabase · PostgreSQL · Framer Motion · crattendanceapp.vercel.app

- Mobile-friendly attendance tool that replaced WhatsApp-based tracking for class representatives; built to solve a personal problem and adopted by **6+** other CRs after launch.

Paper Vault 2026 – Present

React · Supabase · PostgreSQL · Framer Motion · paper-vault-ivory.vercel.app

- Student-built platform where students upload past exam papers to a shared vault used by **35+** students, making study materials searchable without depending on seniors.

EDUCATION

Kohat University of Science & Technology (KUST) Expected 2027

BSc Computer Science · CGPA 3.98 / 4.00 · Class Representative (2023 – 2027)

- Coursework focus: Full-Stack Development, AI Engineering, DevOps, Data Structures & Algorithms.

ACHIEVEMENTS & ACTIVITIES

- Winner — University Quiz Competition.
- Representative — PEAK Inter-School Debate Competition.
- Hacktoberfest Open-Source Contributor.
- PM Laptop Scheme 4.0 Recipient — awarded a government laptop for academic merit.
